p_T^{miss} (GeV)

Detailed description: The bottom plot shows the ratio of data to Monte Carlo simulation (Data/MC) on a logarithmic y-axis ranging from 0.2 to 2.0. The x-axis is the missing transverse momentum (p_T^{miss}) in GeV, ranging from 0 to 1500. Data points are shown as black circles with vertical error bars. A horizontal line at y=1.0 represents the expected ratio. A hatched band around y=1.0 indicates the statistical and systematic uncertainties. The data points are generally consistent with the expected ratio, with some fluctuations at higher p_T^{miss}.
