p_T^{miss} (GeV)

Detailed description: The figure consists of two panels sharing a common x-axis representing p_T^{miss} (GeV) from 0 to 1500. The top panel is a stacked histogram showing the number of events on a logarithmic y-axis from 10⁻¹ to 10⁶. The background components are stacked from bottom to top: VV+VVV (dark olive green), Top (blue), W → ℓν (tan), Z → νν̄ (orange), QCD Multijet (pink), and DY (teal). A hatched band represents the statistical and systematic uncertainty. Data points are shown as black circles with error bars. The bottom panel shows the ratio of data to Monte Carlo (Data/MC) on a linear y-axis from 0 to 2. The data points are black circles with error bars, and a hatched band represents the uncertainty. The ratio is generally close to 1, indicating good agreement between data and Monte Carlo simulation.
